FASTER EDITING WITH NC-ASSISTANT

NC-Assistant identifies any M or G code you point at and provides a dynamic interface for modifying its values. In addition it allows you to quickly insert, edit and record complex cycles and macros. Common operations are included such as program start, program stop, tool change, and more.

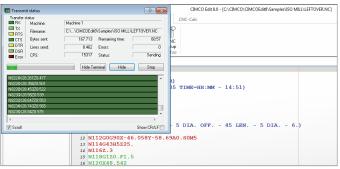

GRAPHICAL BACKPLOTTER

The graphical backplotter handles 5-axis Mill, 2-axis Lathe and 5-Axis Mill-Turn CNC programs and supports solid visualization of NC code with toolholder collision check and gouge detection. Program changes are automatically reflected in the plot. Analyze the plot with dynamic zoom, pan, rotate and measuring functions.

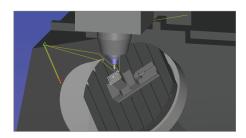

INTELLIGENT FILE COMPARE

The fully configurable side-by-side file compare quickly identifies changed and deleted/inserted lines, but ignores trivial format changes like block renumbering and spacing. Differences are displayed one line at a time, all at once or printed side-by-side for offline review.

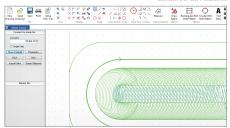

CNC COMMUNICATIONS AND DNC

CIMCO Edit includes DNC capabilities for reliable RS-232 communications with a variety of CNC controls. With the DNC option you can send and receive CNC programs to multiple machines simultaneously from inside CIMCO Edit.

MACHINE SIMULATION NEW

CIMCO Machine Simulation helps protect expensive CNC machine tools against potentially disastrous crashes and collisions by providing simulation of all types of CNC machine tools in a virtual machining environment.
